V-MAXX Sport Radar - SPEED Check incl. tripod

High quality Sport Radar Speedometer incl. tripod

Item number 1710 / EUR 149.90 *

You get a sports radar including tripod, which enriches every workout and that is variably designed. The V-MAXX is versatile and easy to use. Lightning fast speeds are calculated with the use of Doppler radar measurement and are prominently displayed. V-MAXX is extremely reliable and easy to use. In training, V-MAXX can motivate higher performance, by measuring the sprint or the shooting power in football, for example. V-MAXX has a special highlight for events and show. A measurement of the shooting power can turn normal shooting practice special competition and guarantees fun.

The operating principle:

V-MAXX has Doppler Radar capability. When switched on, it sends out waves with a wavelength of 24.150 GHz. If they hit the moving object, the waves are sent back. From the time difference until the arrival of the reflected waves, the device calculates the distance. From a variety of measurements per unit of time, it determines the variation in the distance and it quickly calculates the speed. The maximum speed is 1.5 km/h. The emitted waves can penetrate into various materials by the high frequency; thus, a measurement behind nets is possible.
